EXPERIENCE

Programmer Analyst | Cognizant Technology Solutions, Chennai

Jul 2025 – Present

Crop Science LIMS Platform — Germany-based Agricultural Client (Oct 2025 – Present)

- Working across **5+ integrated LIMS applications** used by lab researchers for biological testing, small-molecule screening, and profiling. Responsible for keeping these systems stable at **99%+ availability** during daily operations.
- Shipped enhancements that improved **result visibility for lab users by ~30%** and made experiment logging faster. Most changes came from stakeholder feedback and were prioritized through Agile sprint planning.
- Fixed bugs and resolved production issues across the full stack (**ASP.NET Core MVC, C#, SQL Server**), bringing the **average resolution time down by about 30%**. Also handled performance monitoring to catch bottlenecks early.

Full-Stack .NET Training — Capstone (Jul – Sep 2025)

- Built an end-to-end web application using **ASP.NET Core MVC/Web API** with clean layered architecture (UI → Service → Repository). Designed **10+ RESTful CRUD APIs** with Entity Framework Core, making the codebase about **30% easier to refactor**.
- Added **role-based authentication via ASP.NET Identity** with admin approval workflows. Wrote unit tests (NUnit + Moq) covering **85% of controllers and repositories**, and documented all API endpoints with Swagger.

Research Intern | DIAT (Ministry of Defense), Pune

May – Jul 2024

- Analyzed **35 years of rainfall data across 1,363 solar farm locations** using Python and Scikit-learn. Built a K-Means clustering model that flagged **47 high-potential zones** for solar expansion — results were used in the Ministry's energy planning.

PROJECTS

NoteNest — AI-Powered Note-Taking App | Java, Spring Boot, Spring Data JPA, Thymeleaf, LLM API, SQL [\[GitHub\]](#)

- Built a **RAG-lite AI pipeline** that pulls the top 5 relevant notes using multi-keyword LIKE search and feeds them as context to the LLM, so responses are grounded in the user's own data, not hallucinated.
- Added **live search with 400ms debounced fetch** returning Thymeleaf fragments without full page reload, plus full-text search across titles and content with deduplication.
- Shipped **3 AI features** — Q&A from notes, folder summarization, and auto tag suggestion — all over a **single LLM API integration** with structured prompts and fallback error handling.

TrackMyFunds — Finance Tracker | Java, Spring Boot, Spring Data JPA, Thymeleaf, Chart.js [\[GitHub\]](#)

- Wrote **composable JPA Specifications** that let users combine **6 filters at once** with server-side pagination across 1,000+ records. Cut task completion time by **~40% compared to spreadsheets**.
- Added one-click CSV export that preserves filter state and streams the full dataset directly to the HTTP response. Also built a **Chart.js dashboard** showing spend across **8 categories and 6 months** with zero additional API calls.

EnchantedPages — Book Manager | React, Node.js, Express, MongoDB, Material UI [\[GitHub\]](#)

- Full-stack MERN app with **compound MongoDB indexing** and denormalized schema that brought query times down by **35%** across 150+ records. APIs run at **99.9% uptime with <200ms response**.
- Built **5 RESTful endpoints** with centralized error handling and Express middleware validation. Frontend uses Material UI components and React Router for SPA navigation so **no full-page reloads**.

TECHNICAL SKILLS

Languages: Java, C++, Python, C#, JavaScript, SQL, HTML/CSS

Frameworks: Spring Boot, Spring Security, Spring Data JPA, React.js, Node.js, Express.js, ASP.NET Core MVC, Entity Framework Core

Databases & Tools: SQL Server, MongoDB, MySQL, Git, Azure DevOps, Docker, Swagger, Postman, VS Code, IntelliJ

Concepts: Data Structures & Algorithms, OOP, SOLID Principles, DBMS, OS, Agile/Scrum

EDUCATION

B.Tech in Computer Engineering — Cummins College of Engineering for Women, Nagpur

8.5/10 | 2021–2025

HSC (Intermediate) — St. Paul Junior College, Nagpur

98% | 2019–2021

ACHIEVEMENTS

- Solved **450+ problems on LeetCode** (peak rating **1650+**, top 8% globally). **Rank 1 at my institute** on GeeksForGeeks out of 500+ students.
- President of Coding Club** and **CP Lead at GDSC** in 2024–25. Ran 20+ coding contests, mentored 100+ students, and grew the club's active membership by 3x.
- Contributed to open-source during **Hacktoberfest**, finished in the **40,000 globally** (DigitalOcean) with 4+ merged pull requests.
